1. What does the following program print if the language uses
    a. Shallow binding 3
    b. Deep binding 3
    c. Ad-hoc binding 9

2. For each of the parameter passing methods what will be the output?
    a. Pass-by-value 5 6 1
    b. Pass-by-reference 5 9 1
    c. Pass-by-value-result 5 13 1
    d. Pass-by-name 8 6 1

3. What will be the values of s1 and s2 if the operands in the expression are evaluated
    a. Left to right s1=10, s2=11
    b. Right to left s1=8, s2=21

4. For the code below, show the stack with all activation record instances when execution reaches position 1 in the following skeletal program.

5. Fill in the empty parts (there are 5 parts) of the following Prolog program to get the given output for the query.
    a. Query
    solve(A,B,C).
    b. Output

    solve(3,4,5)
    d
    t
    s
    does not matter
