Q1) What kinds of behaviors radio waves possess that can vary under certain conditions such as an impedance mismatch or presence of objects in the transmission path? Please list and describe.

Q2) Consider a technology-decorated apartment where you might live at least 10 years later which many / all appliances are embedded with computing devices and communication interfaces. What kind of wireless communication technologies would be used in such an apartment?

In your Answer,

i) mention the use of the device e.g. refrigerator cooling, freezing, keeping fresh etc include as many devices / appliances as possible

ii) type of wireless tech for that device / appliance

iii) why did you consider that wireless tech in that device

Answer considering power, throughput, reliability, latency, and jitter requirements. In your answer give reason to use of that wireless tech subject to these requirements
